

Why is battery energy storage a problem in Indonesia?

However, the problem arises because RES especially solar and wind energy are intermittency, highly dependent on nature, and leading to unstable load power supply risk. Using a battery energy storage system (BESS) is one way to overcome instability in the power supply and increase flexibility and RES penetration in Indonesia.

What is electrochemical energy conversion & storage (EECS)?

Electrochemical energy conversion and storage (EECS) technologies have aroused worldwide interest as a consequence of the rising demands for renewable and clean energy. As a sustainable and clean technology, EECS has been among the most valuable options for meeting increasing energy requirements and carbon neutralization.

What is electrochemical energy storage (EES)?

It has been highlighted that electrochemical energy storage (EES) technologies should reveal compatibility, durability, accessibility and sustainability. Energy devices must meet safety, efficiency, lifetime, high energy density and power density requirements.

How big is Indonesia's electricity capacity?

In the past ten years, Indonesia has experienced a substantial expansion in its electricity capacity, which has grown from 45.2 GW in 2012 to 79.8 GW by 2022 (Ministry of Energy and Mineral Resources Indonesia, 2023), as shown in Fig. 1. Including off-grid sources, the total capacity reaches 83 GW.

Are renewables a good source of energy in Indonesia?

As shown in Fig. 2 Despite an overall boost in energy generation, renewables only slightly improved their contribution to the energy mix, from 11.24 % to 13 %, with hydro and geothermal sources registering modest increases (Ministry of Energy and Mineral Resources Indonesia, 2023). Fig. 2.

Does Indonesia have a unique electricity system?

Indonesia's unique archipelagic geography, comprising over 16,000 islands, alongside significant coal reserves, has shaped a distinctive electricity system (BPS, 2020; Pambudi, 2017).
