

What is the energy sector like in Czech Republic?

Includes a market overview and trade data. The Czech energy sector is largely built around two large nuclear plants and several smaller conventional coal power plants. Nuclear and coal power plants provide primarily baseload power at a high level of utilization, while gas fired units, reservoir hydro and pumped storage provide flexible generation.

How is energy used in Czechia?

Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.

What is the energy mix in the Czech Republic?

The Czech energy mix was made up of 53.60 percent fossil fuels (47.50 percent lignite, 5.86 percent natural gas, etc.), 40.95 percent nuclear power, and 5.46 percent renewables (3.34 percent biomass, 1.47 percent solar, 0.63 percent water, etc.).

How much energy does the Czech Republic emit per capita?

The EU average was 7.9 tons per capita. Czech Republic's emissions were comparable to those of Japan or the Netherlands. In 2023, the city of Brno is working to modernise its heat generation and distribution infrastructure.

Does the Czech Republic produce natural gas?

The Czech Republic has no significant production of natural gas or oil and is fully dependent on imports. The country is integrated into regional transmission systems and can purchase oil and gas from different countries based on market prices in Rotterdam or elsewhere. Most oil and gas are imported via Germany.

Is coal still used in Czech power generation?

Coal still provides most of the fuel used in Czech power generation. While coal's phase-out is assumed in 2035-2038, coal-based energy companies already face difficulties due to the rising costs of carbon credits and other impacts of the EU's Green Deal.
