Can EMS manage a battery energy storage system?

Abstract: In this paper, an Energy Management System (EMS) that manages a Battery Energy Storage System (BESS) is implemented. It performs peak shaving of a local load and provides frequency regulation services using Frequency Containment Reserve (FCR-N) in the Swedish reserve market.

What is an Energy Management System (EMS)?

By definition, an Energy Management System (EMS) is a technology platform that optimises the use and operation of energy-related assets and processes.

Can energy management system manage a battery energy storage system?

Multiple such systems can be aggregated to improve flexibility of the system. In this paper, an Energy Management System (EMS) that manages a Battery Energy Storage System (BESS) is implemented.

What is an energy management system?

Used effectively, an Energy Management System can be a pivotal lever to pull on to reduce operational costs for sites using energy storage. Its cost-effectiveness lies in the following key functions that require optimum programming. EMS provides constant monitoring of all energy-related systems and processes.

What is a battery energy storage system (BESS)?

Why not share it: In the context of Battery Energy Storage Systems (BESS) an EMS plays a pivotal role; It manages the charging and discharging of the battery storage units, ensuring optimal performance and longevity of the batteries which ultimately determines the commercial return on investment.

What is EMS & how does it work?

The EMS consists of; a Prognosis Module running a day ahead to allow for identification of intervals for peak shaving and frequency regulation, and a Real-time Operation Module running on the day of operation creating BESS control commands.
