

What is the iShares energy storage & materials ETF?

The iShares Energy Storage & Materials ETF (the "Fund") seeks to track the investment results of an index composed of U.S. and non-U.S. companies involved in energy storage solutions aiming to support the transition to a low-carbon economy, including hydrogen, fuel cells and batteries.

Why should you invest in electric car & energy storage ETFs?

These ETFs offer investors exposure to not just electric vehicle and energy storage firms, but also companies working in the materials and mining segments which are involved in the production of high-end electric cars or battery storage solutions.

What are the risks associated with investing in battery and energy storage solutions?

\*Holdings are subject to change without notice. There are risks associated with investing, including possible loss of principal. The Fund invests in equity securities of exchange-listed companies globally involved in the investment themes of Battery and Energy Storage Solutions ("BESS") and Innovation.

Which energy storage stocks are a good investment?

Albemarle is the top holding, followed by Tesla, so if you can't decide from the previous stocks, this fund is a good one-stop investment to play the pending energy storage boom. With more than \$1 billion under management and about 60 components, this First Trust fund is another interesting and diversified way to play energy storage.

What is the future of energy storage?

The global transition from conventional energy sources to green energy is driving the development of BESS (Battery Energy Storage Systems) technologies and related ETFs. The costs of energy storage are projected to reduce by 66-80 percent by 2030 and the global energy storage market is expected to grow up to 426 bln USD.

Are lithium batteries the future of energy storage?

You'll have to make your peace with Tesla making most of its profits from electric vehicles rather than storage, but that may not be too much of a deterrent for many investors given the fact that Tesla has nearly doubled year to date in 2023. Lithium batteries are seen by many as the future of energy storage.
