

Who supports YG's research on energy storage?

Y.G.'s research on energy storage was supported through the Fluid Interface Reactions, Structures, and Transport (FIRST) Center, an Energy Frontier Research Center funded by the U.S. Department of Energy, Office of Science, and Office of Basic Energy Sciences. Competing interests: None declared.

Do energy storage technologies address volatility issues in thermal and electrical res?

The present review demonstrates that energy storage technologies are pivotal to address volatility issues in both thermal and electrical RES, to increase the level of energy efficiency by exploiting excess heat and waste heat, to support the development of new technologies, i.e., e-mobility.

How does nanostructuring affect energy storage?

This review takes a holistic approach to energy storage, considering battery materials that exhibit bulk redox reactions and supercapacitor materials that store charge owing to the surface processes together, because nanostructuring often leads to erasing boundaries between these two energy storage solutions.

Can building applications support power network stability?

In this context, building applications have been widely studied over the last decades, since buildings account for about 40% of the final energy consumption and it is expected they can play a fundamental role in supporting power network stability through DSM measures.

Can nanomaterials improve the performance of energy storage devices?

The development of nanomaterials and their related processing into electrodes and devices can improve the performance and/or development of the existing energy storage systems. We provide a perspective on recent progress in the application of nanomaterials in energy storage devices, such as supercapacitors and batteries.

Does low power density of energy harvester cause unstable output voltage?

Currently, the low power density of energy harvester would lead to unstable output voltage of energy storage units. Thus, multidisciplinary collaboration among materials science, electronics and biology is crucial. P.S.L. acknowledges the funding support from the National Research Foundation Investigatorship (NRF-NRFI201605).
