How much does graphite cost in 2024?

Natural graphite production in 2024 is estimated at 1.3 million tonnes, while synthetic graphite production reaches approximately 3 million tonnes. Prices remain elevated due to strong demand and supply constraints, with high-quality flake graphite commanding \$2,000-2,400 per tonneand spherical graphite reaching \$4,000-4,700 per tonne.

Will graphite price recover from cyclical lows in 2024?

China controls 75% of the global graphite anode supply chain. Most analysts are forecasting a fairly balanced graphite market in 2024, with the possibility of some price recovery from the 2023 cyclical lows. UBS tips graphite prices to surge 50% from the 2023 lows and has set its long-term flake graphite price at \$850/t.

Why are graphite prices rising?

This has resulted in some recent price increases in the graphite market and a large amount of uncertainty around graphite products supply outside of China. China controls 75% of the global graphite anode supply chain.

When does graphite become a critical material?

Then in November 2023,the European Union added synthetic graphite to its list of critical materials as part of their Critical Raw Materials Act ("CRMA"). Finally,in late 2023,China introduced temporary export permits for some graphite products (natural flake graphite,spherical graphite,&synthetic graphite) to apply from December 1,2023.

Will graphite demand double by 2040?

Graphite demand almost quadruplesby 2040 in the NZE Scenario, while demand for nickel, cobalt and rare earth elements doubles. The combined market value of key energy transition minerals - copper, lithium, nickel, cobalt, graphite and rare earth elements - more than doubles to reach USD 770 billion by 2040 in the NZE Scenario.

How much does an energy storage system cost?

Energy storage system costs stay above \$300/kWhfor a turnkey four-hour duration system. In 2022,rising raw material and component prices led to the first increase in energy storage system costs since BNEF started its ESS cost survey in 2017. Costs are expected to remain high in 2023 before dropping in 2024.
