

Who can benefit from energy storage testing & certification services?

We provide a range of energy storage testing and certification services. These services benefit end users, such as electrical utility companies and commercial businesses, producers of energy storage systems, and supply chain companies that provide components and systems, such as inverters, solar panels, and batteries, to producers.

Why do you need a battery safety test?

As a global leader in battery safety testing, we help battery-operated product manufacturers gain fast, unrestricted access to the global market. We not only test and certify batteries but also contribute to the development and international harmonization of industry safety and performance standards.

What is battery testing?

Battery testing ensures the safety, quality and reliability of batteries across a range of industries. Discover how we help manufacturers obtain battery compliance to enter global markets.

How can a battery module & pack Testing Service help?

Our battery module and pack testing services can evaluate compliance with the applicable battery testing safety standards and regulations. Our building inspections help identify building compliance gaps and guide improvements for proper operation of your life safety, fire safety and security systems.

What is battery safety & reliability?

Battery safety and reliability is also a key concern for the renewable energy industry, which utilizes a wide selection of technologies for solar energy storage and other uses. Battery Abuse Testing - Simulate extreme environmental conditions and scenarios to test your battery beyond its limits.

Are energy storage systems reliable and efficient?

Energy storage systems are reliable and efficient, and they can be tailored to custom solutions for a company's specific needs. Benefits of energy storage system testing and certification: We have extensive testing and certification experience.

We evaluate, test and certify virtually every type of battery available -- including lithium-ion battery cells and packs, chargers and adapters -- to UL Standards as well as key international, national and regional regulations including:

UL Solutions' services cover the energy storage industry's entire value chain. We are a leader in safety testing and certification for battery technology. Our performance testing offerings include competitive benchmarking, ...

Comprehensive Battery Testing solutions helping products to market faster. From electric vehicles and personal electronics to renewable energy, Intertek offers Total Quality Assurance in battery testing and certification services, ensuring ...

Thermal Performance Testing: Lithium-ion batteries are sensitive to temperature fluctuations, and improper thermal management can lead to dangerous situations like overheating and thermal ...

Battery Environmental Testing/Battery Durability Testing - Demonstrate the quality and reliability of your battery. Our tests include shock and vibration, EMC, thermal cycling, corrosion, dust, salt and humidity tests. Battery Lifecycle ...

We perform the evaluation, testing and certification, and standards solutions your battery and energy storage products require, leveraging our IECEE CB Scheme accreditation (which allows you to access up to 70 countries) and CSA ...

2 The Role of Energy Storage Testing Across Storage Market Development (Best Practices for ... o A variety of battery storage is currently designed for consumer electronics or for vehicle ...

Safety requirements for secondary lithium cells and batteries for use in electrical energy storage systems. VDE-AR-E 2510-50 . Stationary battery energy storage system with lithium batteries ...

With over 100 years of combined industry-relevant battery test experience, our grid & energy storage battery testing labs in Hopkinton, MA and Gainesville, GA are the largest independent ESS testing facilities in North America. From ...

Safety testing at Intertek involves rigorous evaluation of battery resilience under extreme conditions, including overcharge, short circuit, crush, puncture, and thermal abuse, to ensure they can withstand potential hazards.

Article 12 of the Regulation concerning batteries and waste batteries (EU) 2023/1542 addresses safety of stationary battery energy storage systems. The compliance of battery systems with ...

With RESA Power, you can rely on our expertise to optimize the performance, reliability, and safety of your Battery Energy Storage System. From initial design to installation, commissioning, maintenance, and system upgrades, we offer ...
