

What are the NFPA standards for energy storage systems?

Two of the most notable standards in the United States are Underwriters Laboratories (UL) 9540 (Standard for Energy Storage Systems and Equipment) and National Fire Protection Association (NFPA) 855 (Standard for the Installation of Stationary Energy Storage Systems).

What should be included in a PFMEA template?

Potential Failure Modes - For each process step, the PFMEA template should include a list of potential failure modes, which are the ways in which the process could fail to meet its intended objectives. These failure modes should be identified based on experience, historical data, and expert knowledge.

Why should you use a PFMEA template?

Using a PFMEA template provides a standardized approach for conducting the analysis, ensuring that all relevant information is captured consistently. It also helps facilitate communication and collaboration among cross-functional team members involved in the process.

Where can I find information on energy storage failures?

For up-to-date public data on energy storage failures, see the EPRI BESS Failure Event Database.<sup>2</sup> The Energy Storage Integration Council (ESIC) Energy Storage Reference Fire Hazard Mitigation Analysis (ESIC Reference HMA),<sup>3</sup> illustrates the complexity of achieving safe storage systems.

What if the energy storage system and component standards are not identified?

Table 3.1. Energy Storage System and Component Standards 2. If relevant testing standards are not identified, it is possible they are under development by an SDO or by a third-party testing entity that plans to use them to conduct tests until a formal standard has been developed and approved by an SDO.

What are the guidelines for battery management systems in energy storage applications?

Guidelines under development include IEEE P2686 "Recommended Practice for Battery Management Systems in Energy Storage Applications" (set for balloting in 2022). This recommended practice includes information on the design, installation, and configuration of battery management systems (BMSs) in stationary applications.

Current Recommendations and Standards for Energy Storage Safety. Between 2011 and 2013, several major grid energy storage installations experienced fires (figure 1). As a result, leading ...
