

The utilization of renewable energy resources becomes a hot topic of widespread concern as energy and environmental problems are getting increasingly severe [1].However, ...

Additionally, innovative capsule designs can prevent PCM leakage, extending the lifespan of thermal energy storage systems. Inside the packed bed latent heat thermal energy storage ...

Such processes include melting of ice, freezing of moist soil, crystal growth, thermal energy storage, casting of metals, thermal control of electronic equipments using ...

We compared the melting and energy storage rates of spherical, cubical, horizontal cylinder, vertical cylinder and triangular prism-shaped capsules, taking into consideration the HTF flow ...

The thermal storage potential of a packed bed filled with paraffin wax capsules was examined. Heat transfer fluid (HTF) at 70 °C inlet temperature for dimpled and plain stainless-steel ...

Miniaturized thermal energy storage (TES) units with phase change materials (PCMs) are promising for the production of portable thermal management devices. In this work, a 100 mm ...

Basic experiments were carried out to simulate a solar energy storage capsule, using a horizontal cylindrical capsule (300 mm length, 40 mm o.d.) filled with naphthalene as ...
