

Can a condensate storage system save energy?

Condensate carries a significant amount of cooling energy, but its chillness is quickly exhausted when it reaches outdoors due to the higher ambient temperature. To address this issue, implementing an energy storage system in HVAC plants can capture and store chilled energy from condensate for later use.

Are condensate-assisted thermal energy storage systems sustainable?

Condensate-assisted thermal energy storage systems offer energy-saving. Bridging research gaps in condensate utilization supports sustainability. Recovery and reuse of condensate generated from the air conditioner are studied extensively for building a sustainable environment.

How to recover energy from low-temperature condensate?

To recover energy from low-temperature condensate, a suitable storage system with cold insulation is necessary. Insulating the drain pipe with materials such as nitrile rubber with a low thermal conductivity of 0.03 W/mK can help prevent energy loss during transportation.

Can condensate recover energy?

The ability to recover energy from condensate is influenced by the thermal characteristics of condensate generation in an HVAC system. The potential of energy recovery from condensate relies on thermal parameters such as temperature and flow rate of AC condensate, .

Does a condensate recovery system provide a good thermal environment?

It is noted that CCU with a condensate recovery system gives a good thermal environment with a minimum energy consumption of 0.75 kWh with effective use of recovered AC condensate of 35 Lh⁻¹ at 10 °C, with a minimum payback period of 4.4 years.

How much condensate does a cold storage unit produce?

The collected data on the quantity of condensate generated from a cold storage unit and a packaged AC unit over three consecutive months are presented in Figs. 6 and 7. The cold storage unit produces 35 Lh⁻¹ at 10 °C; 1 °. Notably, no modifications were made to the indoor set points or loading/unloading schedules during the evaluation period.
