

Can software tools be used for valuing energy storage?

Taking advantages of the knowledge established in the academic literature and the expertise from the field, there are efforts from multiple parties (e.g., national laboratories, utilities, and system integrators) in developing software tools that can be used for valuing energy storage.

How can battery management and energy storage systems be simulated?

Battery management and energy storage systems can be simulated with Simscape Battery, which provides design tools and parameterized models for designing battery systems.

What are energy storage systems?

Energy storage systems (ESSs), with the ability to alternatively charge and discharge energy, can provide a wide range of grid services [2,3] to tackle the above challenges. There are several ways to categorize these services. A common method is based on the time scale of the charge/discharge cycle.

What software is used for power system design?

The most prevalent software tool for control system design is MATLAB($\circledR$). Various aspects of electric power systems are easily modeled in MATLAB. A wide range of power system models are available for the MATLAB/Simulink environment. There are also several open-source MATLAB-based tools for power system design and analysis.

Does energy storage need a dynamic simulation tool?

For energy storage applications focused on improving the dynamic performance of the grid, an electromechanical dynamic simulation tool is required to properly size and locate the energy storage so that it meets the desired technical performance specifications.

Are energy storage systems interoperable?

Furthermore, as the application space of energy storage grows very quickly across the entire grid from generation, transmission, distribution to load, the tools are also required to analyze ESSs' interoperability across different spaces (e.g., ESSs that are located in distribution systems but provide transmission services).

These tools can be classified into two groups: (1) power system simulation and planning tools for analyzing the technical contributions of ESSs, and (2) techno-economic analysis tools for ...
