Three-dimensional research directions in fault diagnosis of lithium-ion battery energy storage station. In summary, the aforementioned literature deeply investigates fault diagnosis methods, transmission systems, and multi-scenario-oriented public datasets for energy storage systems.

What is fault diagnosis of battery systems in New energy vehicles?

In this paper, the fault diagnosis of battery systems in new energy vehicles is reviewed in detail. Firstly, the common failures of lithium-ion batteries are classified, and the triggering mechanism of battery cell failure is briefly analyzed. Next, the existing fault diagnosis methods are described and classified in detail.

How can advanced sensing equipment be used in energy storage systems?

Owing to the extensive spatial configuration of lithium-ion batteries in energy storage systems, diverse advanced sensing equipment can be deployed to facilitate effective monitoring and diagnosis. This forms the unique representations, which mainly include acoustic signal, gas, visual image, etc.

What are the methods used for battery system fault diagnosis?

Currently, the methods used for battery system fault diagnosis mainly include model-based, data-driven, knowledge-based, and statistical analysis-based methods, as shown in Figure 3. Furthermore, Table 1 shows the fault diagnosis methods and typical fault diagnosis cases. Figure 3.

Can a cyber-physical system detect overvoltage and undervoltage faults?

He et al. proposed a Cyber-Physical System (CPS), which integrates Lab data and EV data to achieve accurate diagnosis of overvoltage and undervoltage faults. Compared with the traditional ECM, the average fault warning time of the method is 51 s earlier.

What is advanced battery system fault diagnosis technology?

In this paper, the current research of advanced battery system fault diagnosis technology is reviewed. Firstly, the existing types of battery faults are introduced in detail, where cell faults include progressive and sudden faults, and system faults include a sensor, management system, and connection component faults.
