

Can EMS manage a battery energy storage system?

Abstract: In this paper, an Energy Management System (EMS) that manages a Battery Energy Storage System (BESS) is implemented. It performs peak shaving of a local load and provides frequency regulation services using Frequency Containment Reserve (FCR-N) in the Swedish reserve market.

What is energy storage system (EMS)?

If we liken the energy storage system to the human body, EMS acts as the brain, determining the tasks performed, establishing reasonable work and rest patterns, and enabling self-protection in case of accidents. Different demands exist for EMS in source-grid side energy storage and industrial and commercial energy storage:

Can energy management system manage a battery energy storage system?

Multiple such systems can be aggregated to improve flexibility of the system. In this paper, an Energy Management System (EMS) that manages a Battery Energy Storage System (BESS) is implemented.

What is a battery energy storage system (BESS)?

Why not share it: In the context of Battery Energy Storage Systems (BESS) an EMS plays a pivotal role; It manages the charging and discharging of the battery storage units, ensuring optimal performance and longevity of the batteries which ultimately determines the commercial return on investment.

Can EMS be used for industrial and commercial energy storage?

However, the traditional EMS cannot be directly used for industrial and commercial energy storage due to different scenarios and cost requirements. Industrial and commercial energy storage sites typically have smaller capacities, larger numbers, wide dispersion, and higher operation and maintenance costs.

Why is EMS important?

Furthermore, EMS plays a vital role in swiftly protecting equipment and ensuring safety. If we liken the energy storage system to the human body, EMS acts as the brain, determining the tasks performed, establishing reasonable work and rest patterns, and enabling self-protection in case of accidents.
