## **SOLAR** PRO. Energy storage evaluation framework

## What is the electricity storage valuation framework (esvf)?

The Electricity Storage Valuation Framework (ESVF) as presented in this report is a continuation of IRENA's previous work on the role of energy storage in facilitating VRE integration (IRENA, 2015a).5 The ESVF is designed to be used to identify the value of electricity storage to different stakeholders in the power system.

What is Irena's energy storage valuation framework (esvf)?

IRENA proposes a five-phase method to assess the value of storage and create viable investment conditions. IRENA's Electricity Storage Valuation Framework(ESVF) aims to guide storage deployment for the effective integration of solar and wind power.

How is electricity storage value assessed?

Values are assessed by comparing the cost of operating the power system with and without electricity storage. The framework also describes a method to identify electricity storage projects in which the value of integrating electricity storage exceeds the cost to the power system.

How can esvf help regulators assess the value of electricity storage?

The ESVF presented in this report is intended to support regulators and other stakeholders in the use of modelling toolsto assess the system value of electricity storage in a power system and assess the monetisable revenues of storage projects under an existing regulatory framework.

What are DOE energy storage valuation tools?

The DOE energy storage valuation tools are valuable for industry, regulators, and other stakeholders to model, optimize, and evaluate different ESSs in a variety of use cases. There are numerous similarities and differences among these tools.

## What is battery energy storage evaluation tool (BSET)?

Battery Energy Storage Evaluation Tool (BSET): BSET is a modeling and analysis toolenabling users to evaluate and size a BESS for grid applications. It models the technical characteristics and physical capability of a BESS. It also incorporates operational uncertainty into system valuation.
