

Can software tools be used for valuing energy storage?

Taking advantages of the knowledge established in the academic literature and the expertise from the field, there are efforts from multiple parties (e.g., national laboratories, utilities, and system integrators) in developing software tools that can be used for valuing energy storage.

What tools are used for energy storage analysis and development?

The tools below are used globally for energy storage analysis and development. System Advisory Model (SAM) SAM is a techno-economic computer model that calculates performance and financial metrics of renewable energy projects, including performance models for photovoltaic (PV) with optional electric battery storage.

Who are the authors of a comprehensive review on energy storage systems?

E. Hossain, M.R.F. Hossain, M.S.H. Sunny, N. Mohammad, N. Nawar, A comprehensive review on energy storage systems: types, comparison, current scenario, applications, barriers, and potential solutions, policies, and future prospects.

Are energy storage systems interoperable?

Furthermore, as the application space of energy storage grows very quickly across the entire grid from generation, transmission, distribution to load, the tools are also required to analyze ESSs' interoperability across different spaces (e.g., ESSs that are located in distribution systems but provide transmission services).

What are energy storage systems?

Energy storage systems (ESSs), with the ability to alternatively charge and discharge energy, can provide a wide range of grid services [2,3] to tackle the above challenges. There are several ways to categorize these services. A common method is based on the time scale of the charge/discharge cycle.

Will a tax credit be available for energy storage projects?

However, with the passage of the Inflation Reduction Act of 2022, tax credits are now available for standalone energy storage systems, and thus lenders may be willing to provide bridge capital that is underwritten based on the receipt of proceeds from an anticipated tax equity investment, similar to renewable energy projects.
