

The COVID-19 pandemic led to an unprecedented shift towards the digitalization of daily activities, like working, shopping, meetings, and recreational activities, worldwide ...

A highly realistic, plant-based bacon that harnesses the power of sustainable seaweed protein made an appearance on ABC's Shark Tank, setting a new record during the show for the highest valuation of a pre-revenue ...

Bristol-led team uses nanomaterials made from seaweed to create a strong battery separator, paving the way for greener and more efficient energy storage. Sodium-metal batteries (SMBs) ...

A team from the University of Bristol created a battery separator using nanomaterials derived from seaweed for sodium-metal batteries, which scientists are eyeing as high-energy and low-cost energy storage ...

In a new paper, published in the Proceedings of the National Academy of Sciences, the researchers address how to use seawater to power the Bionic Leaf. Nocera, the Patterson Rockwood Professor of Energy, spoke with ...

Seawater batteries are unique energy storage systems for sustainable renewable energy storage by directly utilizing seawater as a source for converting electrical energy and chemical energy. ...

A battery that has crucial parts made from seaweed could pave the way to greener energy storage. Most batteries in smartphones, electric cars and laptops rely on lithium. This metal is in...

In the past few decades, electricity production depended on fossil fuels due to their reliability and efficiency [1]. Fossil fuels have many effects on the environment and directly ...

As reported by Science Daily, a Bristol-led team has paved the way for more sustainable energy storage with an innovative battery separator made from seaweed. Combining high-efficiency ...

Phytoplankton and seaweeds are among the species competing for the solar energy. Increasing the seaweed population in the oceans and the seas will eventually limit the availability of the ...

The use of algal biomass as a renewable source of energy is potentially promising. The literature on biofuels derived from Sargassum is limited compared to other macroalgae. The unusual ...

Biopolymers are an emerging class of novel materials with diverse applications and properties such as superior sustainability and tunability. Here, applications of biopolymers ...

Bristol-led team uses nanomaterials made from seaweed to create a strong battery separator, paving the way for greener and more efficient energy storage. Sodium-metal batteries (SMBs) are one of the most promising ...

21 October 2022 18 October 2022 Seaweed-based battery powers confidence in sustainable energy storage
Bristol-led team uses nanomaterials made from seaweed to create a strong ...
