

Does enlarging a glass tube improve thermal storage efficiency?

It is also found that a high rate of the HTF inlet flow can shorten the hot water supply time with a smaller liquid fraction of the PCM. Furthermore, enlarging the glass tube leads to a higher thermal efficiency and thermal storage efficiency.

Is a thermal energy storage integrated evacuated tube heat pipe solar air heater suitable?

This study aims to present a novel thermal energy storage integrated evacuated tube heat pipe solar air heater suitable for high-temperature applications. A new heat pipe arrangement was introduced in this study by attaching all the evaporator tubes of heat pipes to a common condenser section.

Does enlarged glass tube affect solar collector?

However, enlarging the glass tube will negatively affect the solar collector. For example, producing solar collectors with enlarged glass tube will become much more difficult and new requirements would have to be made for the manufacturing process of such solar collectors. How a glass tube can be broken by concentrating solar radiation?

They used two concentric tubes separated by vacuum having a selectively coated surface of the inner tube and hard glass for the outer tube. Earlier to this, there were chances of breaking of glass tube due to nonlinear heating of the opposite side of the glass tube by concentrating solar radiation.

What happens if a glass tube is enlarged?

When the diameter of the inner tube is enlarged, the area for collecting heat and the mass of PCM embedded inside the ETC increase. Thus, the thermal efficiency and thermal storage efficiency of the ETC increase with the increase in the diameter of the inner tube. However, enlarging the glass tube will negatively affect the solar collector.

How does a solar absorbing tube work?

The heat captured by the absorbing tube is transferred to the PCM and the HTF flowing through the U-type copper tube. The inlet of the U-type tube faces the solar radiation. PCM is separated from the U-type copper tube by the aluminum fins.

The outer glass tube is defined as a transparent surface allowing sunlight to pass through, while the surface of the inner glass tube is defined as an opaque wall with an ...
