

What is energy literacy?

Energy literacy is the understanding of how energy is generated, transported, stored, distributed, and used; awareness about its environmental and social impacts; and the knowledge to use it efficiently. The objective of the study is to provide a systematic review of the literature concerning energy literacy.

Does energy literacy affect energy consumption?

The authors of the present paper consider that regardless of whether the increase in knowledge about energy makes an impact on actions aimed at having efficient energy consumption, energy literacy is essential for people who seek to improve their energy use habits and contribute to sustainable development can do it effectively.

Does scientific knowledge on Energy Literacy address the evaluation of energy literacy?

According to the review carried out, the research question can be answered by saying that most of the scientific knowledge on energy literacy addresses the evaluation of energy literacy in different populations, in particular students of different levels, and the construction, application, and evaluation of tools to improve energy literacy.

What are the main objectives of energy literacy measurement?

Until the date of the review, 47 documents were found with a main objective related to the measurement of energy literacy. These were subdivided into five classes of objectives: Adaptation of measures, Comparison, Construction of measures, Assessment, and Measures Evaluation.
