

What's new in energy storage safety?

Since the publication of the first Energy Storage Safety Strategic Plan in 2014, there have been introductions of new technologies, new use cases, and new codes, standards, regulations, and testing methods. Additionally, failures in deployed energy storage systems (ESS) have led to new emergency response best practices.

Are energy storage systems safe?

The emergence of energy storage systems (ESSs), due to production from alternative energies such as wind and solar installations, has driven the need for installation requirements within the National Electrical Code (NEC) for the safe installation of these energy storage systems.

Are lithium-ion batteries safe for residential energy storage systems?

Residential energy storage systems (ESS) using lithium-ion batteries can present safety challenges for homeowners and firefighters. While the failure of residential ESS lithium-ion batteries is a rare event, fire and explosion hazards have already occurred. This guide provides steps homeowners and ESS installers can take to minimize these hazards.

What is the energy storage safety strategic plan?

Under the Energy Storage Safety Strategic Plan, developed with the support of the Department of Energy's Office of Electricity Delivery and Energy Reliability Energy Storage Program by Pacific Northwest Laboratory and Sandia National Laboratories, an Energy Storage Safety initiative has been underway since July 2015.

Are there safety gaps in energy storage?

Table 6. Energy storage safety gaps identified in 2014 and 2023. Several gap areas were identified for validated safety and reliability, with an emphasis on Li-ion system design and operation but a recognition that significant research is needed to identify the risks of emerging technologies.

Can energy storage be used as a temporary source of power?

However, energy storage is increasingly being used in new applications such as support for EV charging stations and home back-up systems. Additionally, many jurisdictions are seeing increasing use of EVs and mobile energy storage systems which are moved around to be used as a temporary source of power.
