

What is a battery overcharge test?

**Overcharge Test** The overcharge test evaluates the safety performance of a battery or battery system under overcharge conditions. In ISO 12405-1 (2)-2012 ,only the overcharge protection function of the battery system is tested. During the test,the cooling system is turned on.

What is a battery overdischarge test?

The overdischarge test simulates the safety of the battery or battery system under the condition of overdischarge[96,97]. In ISO 12405-1-2012 ,the battery system is discharged at 1 C until the guard automatically interrupts the discharge or the sample voltage drops to 25% of the nominal voltage or continues to discharge for 30 min.

What is a Lib overcharge test?

**Overcharge test** The overcharge test evaluates the ability of a LiB to withstand an overcharge condition. The overcharge test procedure is also used for testing the functionality of the overcharge/over-discharge protection system . The goal is to charge the cell beyond its voltage limits recommended by the manufacturer.

How to test adiabatic overcharge of a lithium-ion battery?

The test steps of the adiabatic overcharge test of a lithium-ion battery are as follow: 1. Place the fresh lithium-ion battery in a 25 ±1°C incubator,conduct constant current discharge at the rate of 0.50 C,and set the discharge cut-off voltage.

How are overcharge tests performed?

The overcharge tests No. 1-5 were carried out using extended volume ARC (EV-ARC) by Thermal Hazard Technology to provide the adiabatic condition, while tests No.6 and No.7 were conducted in an iron box at ambient temperature without any temperature control.

How to protect a battery from overcharge?

The factors of battery material,charging pattern,and battery structure design on the overcharge effect are also summarized. To some extent,using external protection devices(such as BMS,OSD,CID) can improve overcharging security. But the internal protection of overcharge additives is more effective.

For external short circuit and overcharge electrical tests, cell protection devices such as positive temperature coefficient components, current interrupting devices and safety vents limit surface ...
