

Which energy storage technologies are included in the 2020 cost and performance assessment?

The 2020 Cost and Performance Assessment provided installed costs for six energy storage technologies: lithium-ion (Li-ion) batteries, lead-acid batteries, vanadium redox flow batteries, pumped storage hydro, compressed-air energy storage, and hydrogen energy storage.

Is there a literature review of energy storage valuation studies?

Balducci et al.'s work [200], which forms the basis of the literature review that has been updated for this paper, provides documentation of numerous energy storage valuation studies and their results. Updates to this dataset include research published in 2018-2020 and studies focused on storage technologies other than BESSs, including PSH.

How much does energy storage cost in a cavern?

Therefore, efforts to reduce cost of storage via engineering design are expected to gain traction. As long-duration energy storage (diurnal and seasonal) becomes more relevant, it is important to quantify cost for incremental storage in the cavern. The incremental cost for CAES storage is estimated to be \$0.12/kWh.

What are DOE energy storage valuation tools?

The DOE energy storage valuation tools are valuable for industry, regulators, and other stakeholders to model, optimize, and evaluate different ESSs in a variety of use cases. There are numerous similarities and differences among these tools.

How is electricity storage value assessed?

Values are assessed by comparing the cost of operating the power system with and without electricity storage. The framework also describes a method to identify electricity storage projects in which the value of integrating electricity storage exceeds the cost to the power system.

Do energy storage valuation studies address resiliency?

Energy storage valuation studies walk cautiously around questions relating to the costs associated with power disruptions. They tend to focus more, if not entirely, on reliability questions rather than addressing the value of resiliency.
