

What are the performance parameters of energy storage capacity?

Our findings show that energy storage capacity cost and discharge efficiency are the most important performance parameters. Charge/discharge capacity cost and charge efficiency play secondary roles. Energy capacity costs must be  $\leq \text{US\$20 kWh}^{-1}$  to reduce electricity costs by  $\geq 10\%$ .

What should be included in a technoeconomic analysis of energy storage systems?

For a comprehensive technoeconomic analysis, should include system capital investment, operational cost, maintenance cost, and degradation loss. Table 13 presents some of the research papers accomplished to overcome challenges for integrating energy storage systems. Table 13. Solutions for energy storage systems challenges.
