

What is spot resistance welding?

Electronics/Electrical Industries (battery packs,circuit boards) - Spot resistance welding is used to join battery cells in the production of battery packs for electric vehicles,electronic devices,and renewable energy storage systems. Besides this,resistance welding is used for soldering and joining small components on circuit boards.

Which welding techniques can be used for connecting battery cells?

Brass (CuZn37) test samples are used for the quantitative comparison of the welding techniques,as this metal can be processed by all three welding techniques. At the end of the presented work,the suitability of resistance spot,ultrasonic and laser beam welding for connecting battery cells is evaluated.

How does welding energy affect electrical contact resistance and tensile force?

Further increasing the welding energy leads to electrode sticking and significant expulsion of bulk material , , , . Fig. 6. Electrical contact resistance and ultimate tensile force as function of welding energy.

What is resistance welding?

It is a type of resistance welding process. The process involves the application of heat and pressure to create a weld at specific points. It is used to join two or more metal surfaces together in localized spots. Resistance welding is a widely used technique in manufacturing,particularly in the automotive industry for the assembly of car bodies.

What are some relevant spot resistance welding standards?

Some relevant spot resistance welding standards include- 1. AWS D17.1/D17.1M(Specification for Fusion Welding for Aerospace Applications) - This standard covers various welding processes including resistance welding. The code provides guidelines for resistance welding processes despite not exclusively focusing on resistance welding.

Why is skilled welding necessary to produce good welding?

Skilled welding is necessary to produce good welding. It is defined as the process of joining two metal pieces, in which the electrical energy is used to generate heat at the point of welding in order to melt the joint. 3. ELECTRIC WELDING The selection of following factors. The type of metal to be joined. The techniques of welding adopted.
