

How does transport affect energy use in the Marshall Islands?

Available data suggest that transport - land, sea and domestic aviation - probably accounts for more petroleum fuel use in the Marshall Islands than all other uses combined. Although there are opportunities to reduce transport energy use, these generally require some years to have a substantial impact.

Is electricity subsidized in the Marshall Islands?

Electricity use has been subsidized in the Marshall Islands since well before Independence in 1986 through a range of grants for capital investments, fuel purchases, hidden subsidies, and recently cross-subsidies from MEC bunkering profits, understandably resulting in high, and now unsustainable, levels of electricity use.

Will solar power work in the Marshall Islands?

Many approaches may work better than others for the Marshall Islands. Grids are based on centrally planned and controlled generation, therefore household-scale solar will not be allowed to feed into the grid. A 'soft' approach

Why is air transport important in the Marshall Islands?

Air transport is the largest user of imported fuel in the Marshall Islands. The quality of life and the economic survival of outer island residents is tied strongly to the cost of transporting goods and people to and from Majuro, Ebeye and other islands. It is especially important that the fuel efficiency of sea transport be improved, both through

How many SHSS are there in the Marshall Islands?

Provided MEC with an electricity subsidy over the last years for the urban areas. It was estimated that, by the end of 2014, and with the completion of the EU/SPC Regional Energy Programme for the Marshall Islands, a total of 3,400 SHSS should be in place, with a government subsidy estimated at USD 530,000 per annum.

Where can I get a freezer in the Marshall Islands?

Refrigeration, including on Arno, Aur, Maloelap, Likiep, and Namu atolls. These systems are operated by the Marshalls Islands Marine Resource Authority. In addition, some shops may run freezers, either from larger stand-alone power systems or from portable gasoline generators. In drought years reverse osmosis water desalination
