

Can a robot use energy as a power source?

As a power source, we consider every possible source of energy that can be utilized by a robot to perform mechanical work, including forms of energy storage that can be introduced as secondary power sources or regenerative intermediate storage systems.

Are energy storage systems a barrier to robot autonomy?

Energy-storage systems are among the most crucial limitations to robot autonomy, but their size, weight, material and design constraints can be re-examined in the context of multifunctional, bio-inspired applications. Here we present a synthetic energy-dense circulatory system embedded in an untethered, aquatic soft robot.

How do untethered robots store energy?

Whereas most untethered robots use batteries to store energy and power their operation, recent advancements in energy-storage techniques enable chemical or electrical energy sources to be embodied directly within the structures and materials used to create robots, rather than requiring separate battery packs.

What types of energy storage can autonomous robots harness?

Although energy storage can take many forms in mechanical systems, we limit our depiction here to five of the most common types that can be harnessed by autonomous robots: electrical, mechanical, chemical, magnetic and thermal.

Could electrochemical energy storage improve robot design?

This use of electrochemical energy storage in hydraulic fluids could facilitate increased energy density, autonomy, efficiency and multifunctionality in future robot designs. An energy-dense hydraulic fluid is used to construct a synthetic circulatory system in a lionfish-like soft robot, enabling untethered movement for up to 36 hours.

What energy sources can be used in robotics?

Case Study: Alternative Robot Power Sources In addition to batteries, combustible fluids, and mechanical energy sources, which are commonly used in robotics, there are additional energy sources that can be utilized in certain conditions. The most basic and simple in implementation are solar panels.
