

What is an energy storage project?

An energy storage project is a cluster of battery banks (or modules) that are connected to the electrical grid. These battery banks are roughly the same size as a shipping container. These are also called Battery Energy Storage Systems (BESS), or grid-scale/utility-scale energy storage or battery storage systems.

Where is the largest battery energy storage project in the world?

1. The Gateway Energy Storage project is located in San Diego County, California. At 230 MW of generation capacity, and soon to be at 250 MW, it is currently the largest battery energy storage project in the world.

What are California's new battery energy storage projects?

The Gateway and Moss Landing projects are just two of the battery energy storage installations being developed across California, a state that has ramped up its use of renewable energy in recent years while phasing out electricity from coal, nuclear, and natural gas-fired power plants.

What is a battery energy storage system?

A battery energy storage system (BESS) is an electrochemical device that charges (or collects energy) from the grid or a power plant and then discharges that energy at a later time to provide electricity or other grid services when needed.

What is California's 'Gateway' Energy Storage Project?

The Gateway installation is the latest in a series of large battery energy storage projects in California, a state counting on energy storage to help supplement its baseload power supply, and replace generation lost due to the closure of thermal power plants.
