How do energy systems measure land use?

Multiple researchers have attempted to quantify land use by energy systems; three frequently used metrics are: ecological footprint, land use intensity, and power density. First, their calculations, basic equations, data used and units are provided and strengths and weaknesses of each method are outlined.

How much land use is used for electricity from storage?

Note that the land use impact for electricity from storage is higher than all land use impacts except biomass and hydro. Still, only a portion of the storage land use (say 0.1%) would be allocated to one GWh of renewable energy.

What metric should be used to calculate solar energy use?

The most recent solar study in the US was completed when the installations were a fraction of current installed capacity. If using the land use intensity metric as defined in Ref. , explain the use of lifetime and its effects. Metrics for land use should include consideration of annual power generation, whether annual  $W_e$  or annual  $Wh_e$ .

What are energy storage systems?

Energy storage systems (ESSs) are effective tools to solve these problems, and they play an essential role in the development of the smart and green grid. This article discusses ESSs applied in utility grids. Conventional utility grids with power stations generate electricity only when needed, and the power is to be consumed instantly.

What is the power density of a land use?

Still, this value is chosen since it is the most updated datum from governmental sources. Assuming a capacity factor of 0.3 gives a land use intensity of  $4.6e4 \text{ m}^2/\text{GWh}$  and a power density of  $2.47 \text{ W}_e/\text{m}^2$ .

How much land use can be discounted if a power plant is commissioned?

So, total land use can be discounted by approximately 1/4 if just US territorial area is of interest. Since no disposal sites have been commissioned in the US, most waste remains on site at power plants. Thus, no additional land footprint is assigned to the disposal stage in this calculation.
