

Are battery energy storage systems noisy?

chris@parkerjonesacoustics.com As Battery Energy Storage Systems (BESS) become increasingly prevalent in the UK, it is crucial to address the potential noise concerns associated with their operation.

What are the key components and noise sources of a Bess facility?

Key components and noise sources of a BESS facility include: Batteries: Rechargeable battery units are the core of the Battery Energy Storage System. Battery units (often 20 ft. in length and 8 ft in width and height) include cooling systems to maintain optimal operating temperature.

Did NMS conduct a noise study for a new battery energy storage facility?

In July, 2022, NMS was retained to conduct a detailed noise study for a new Battery Energy Storage Facility near Los Angeles (for confidentiality purposes, no identifying client or site information is included in this article). The facility consisted of over 300 batteries, over 60 PCS units and two transformers covering about 6 acres of land.

What are battery energy storage systems?

These battery energy storage systems typically consist of rechargeable batteries, power conversion systems, cooling systems and control electronics. BESS facilities tend to produce high noise levels generated mostly by the compressors and fans in the electrical equipment cooling systems.

Are noise emissions increasing with energy density?

More sophisticated cooling systems mean that the noise emissions are not necessarily growing with the increased energy density, however. Inverter and BESS firm Sungrow pointed out in a recent interview that its latest generation product increased the energy-per-container from 2.5MWh to 5MWh but the max noise emissions went from 79dB to 75dB.
