

Can power spot market regulation guarantee economic profits of distributed energy storages?

Finally, case studies under multiple scenarios of power spot market verify that the regulation mode and strategy can effectively guarantee the economic profits of distributed energy storages by setting aggregation groups and reasonable risk preference coefficients.

How can energy storage power stations achieve a favorable return on investment?

Energy storage power stations can explore a multi-channel income approach and achieve a favorable return on investment by combining "peak-valley price difference", "capacity price", "peak-shaving price" and "rental fee".

What are new energy power stations?

Therefore, there is a need to focus on studying the approaches and benefits of new energy power stations (NEPSs) participating in the electricity market. NEPSs collectively refer to all large-scale renewable energy generation systems, including wind farms, solar power stations, and the mixture of them.

Can shared energy storage be shared between power stations?

At present, there have been some research results on shared energy storage (SES), but the main research scenario is sharing between prosumers in communities [7,8], and few studies have discussed energy storage sharing between power stations.

Can energy storage power station consider multi-channel income mode?

To sum up, the energy storage power station can consider multi-channel income mode, and obtain satisfactory return on investment through the combination of "peak-valley price difference" + "capacity price" + "peak-shaving price" + "rental fee".

Can distributed energy storages participate in energy trading through aggregation?

However, individually accessing every distributed energy storage to the dispatch centre results in a high cost and low efficiency, which needs to be improved by connecting through the aggregator. To this end, this paper proposes a regulation mode and strategy for distributed energy storages participating in energy trading through aggregation.

The reform of power spot market in China provides a new profit mode, determining energy trading strategy based on the power spot prices for distributed energy storages. However, individually accessing every distributed ...
