Which countries have pumped energy storage capacity?

Europe and China are leading the installation of new pumped storage capacity - fuelled by the motion of water. Batteries are now being built at grid-scale in countries including the US, Australia and Germany. Thermal energy storage is predicted to triple in size by 2030. Mechanical energy storage harnesses motion or gravity to store electricity.

What are examples of thermal energy storage systems?

Liquids - such as water - or solid material - such as sand or rocks - can store thermal energy. Chemical reactions or changes in materials can also be used to store and release thermal energy. Water tanks in buildings are simple examples of thermal energy storage systems.
