

Could renewable generation capacity improve Mauritania's mining operations?

The report's analysis finds that expanding renewable generation capacity in Mauritania could improve the sustainability of mining operations, which currently represent close to a quarter of the country's GDP. These operations are energy-intensive, and mines currently rely predominantly on fossil fuels for their electricity supply.

Why should you invest in Mauritania?

Investing in Mauritania can offer a wide range of opportunities, particularly in the energy sector. With major gas discoveries and large-scale renewable energy projects in development, the country is poised for significant growth in this area.

Is green hydrogen an emerging market opportunity in Mauritania?

Green hydrogen is an emerging market opportunity in Mauritania, given the availability of about 700,000 square kilometers in the country for the installation of solar panels and/or wind turbines for power generation, according to the Ministry of Petroleum, Mines, and Energy.

Why should Mauritania invest in wind & solar energy?

Mauritania has high-quality wind and solar resources whose large-scale development could have catalytic effects in supporting the country to deliver universal electricity access to its citizens and achieve its vision for sustainable economic development.

How will Mauritania's wind power plant affect its energy mix?

The wind power plant in the northern town of Boulenouar will also significantly increase the share of the country's energy mix. The significant share of renewable energy in Mauritania's total energy portfolio is impressive, especially compared to other countries on the continent.

What is Mauritania's strategic plan?

Mauritania, as outlined in Mauritania's ambitious three-step strategic plan for the future development of its petroleum, mines, and energy resources from 2022 to 2030.

4. What is SMES? o SMES is an energy storage system that stores energy in the form of dc electricity by passing current through the superconductor and stores the energy in the form of a dc magnetic field. o The conductor for carrying the current operates at cryogenic temperatures where it becomes superconductor and thus has virtually no resistive losses as it ...
