

What is an EPC agreement for a battery energy storage system?

The negotiation of an engineering, procurement and construction (EPC) agreement for a battery energy storage systems (BESS) project typically surfaces many of the same contractual risk allocation issues that one encounters in the negotiation of an EPC agreement for a solar or wind project.

What is an EPC agreement?

EPC agreements may also provide the EPC contractor the ability to permanently "buy down" BESS project performance via payment of agreed liquidated damages, subject typically to specified minimum levels of performance required to be met or exceeded under all circumstances. Decommissioning and disposal

What are the implications of a combined renewables-plus-storage project?

There will be important implications for a combined renewables-plus-storage project depending upon whether the project is DC coupled or AC coupled. For example, AC coupled systems are generally viewed as being simpler since the renewable energy storage can be connected separately with AC power.

How do energy storage contracts work?

For standalone energy storage contracts, these are typically structured with a fixed monthly capacity payment plus some variable cost per megawatt hour (MWh) of throughput. For a combined renewables-plus-storage project, it may be structured with an energy-only price in lieu of a fixed monthly capacity payment.

Does an EPC agreement include a decommissioning plan?

To the extent decommissioning is addressed in the EPC agreement and the obligation allocated to the EPC contractor, a specific decommissioning plan will often be attached as an exhibit to the EPC agreement.

How many new energy storage projects are commissioned in China?

Figure 2: Cumulative installed capacity of new energy storage projects commissioned in China (as of the end of June 2023) In the first half of 2023, China's new energy storage continued to develop at a high speed, with 850 projects (including planning, under construction and commissioned projects), more than twice that of the same period last year.

The majority of new energy storage installations over the last decade have been in front-of-the-meter, utility-scale energy storage projects that will be developed and constructed pursuant to procurement contracts entered ...

2 ???&#0183; The strategic partnership they are forming will be able to participate in the bidding process for upcoming engineering, procurement and construction (EPC) contracts for Gore ...

This project is the first international public bidding electrochemical energy storage EPC project of the South African National Power Company. The source of funds is the ...

5 ???&#0183; In the first three quarters of 2024, the bidding volumes for battery systems, energy storage systems, and EPC projects all exceeded the same period of 2023 in terms of energy capacity. ... the capacity of domestic energy ...

The bidding volume of energy storage systems (including energy storage batteries and battery systems) was 33.8GWh, and the average bid price of two-hour energy storage systems (excluding users) was ...

Matt Domeier, energy storage EPC. The projects we're building are also getting bigger. We're in the middle of construction on a 350MW battery storage facility and are starting to see many more mega-scale battery energy ...

Whether acquired from the EPC contractor in an EPC agreement or an equipment supplier in an equipment supply agreement, typical performance guarantees for BESS projects include round trip efficiency, ...
