Do energy storage systems need a CSR?

Until existing model codes and standards are updated or new ones developed and then adopted, one seeking to deploy energy storage technologies or needing to verify an installation's safety may be challenged in applying current CSRs to an energy storage system (ESS).

Are energy storage codes & standards needed?

Discussions with industry professionals indicate a significant need for standards..." [1,p. 30]. Under this strategic driver, a portion of DOE-funded energy storage research and development (R&D) is directed to actively work with industry to fill energy storage Codes &Standards (C&S) gaps.

What if the energy storage system and component standards are not identified?

Table 3.1. Energy Storage System and Component Standards 2. If relevant testing standards are not identified, it is possible they are under development an SDO or by a third-party testing entity that plans to use them to conduct tests until a formal standard has been developed and approved by an SDO.

Does industry need energy storage standards?

As cited in the DOE OE ES Program Plan, "Industry requires specifications of standards for characterizing the performance of energy storage under grid conditions and for modeling behavior. Discussions with industry professionals indicate a significant need for standards ..." [1, p. 30].

What safety standards affect the design and installation of ESS?

As shown in Fig. 3,many safety C&S affect the design and installation of ESS. One of the key product standards that covers the full system is the UL9540Standard for Safety: Energy Storage Systems and Equipment . Here, we discuss this standard in detail; some of the remaining challenges are discussed in the next section.

Do electric energy storage systems need to be tested?

It is recognized that electric energy storage equipment or systems can be a single device providing all required functions or an assembly of components, each having limited functions. Components having limited functions shall be tested for those functions in accordance with this standard.

NFPA 855--the second edition (2023) of the Standard for the Installation of Stationary Energy Storage Systems--provides mandatory requirements for, and explanations of, the safety ...

technologies currently operating on the grid should meet these requirements.1 The energy storage industry is continually improving safety features with regulatory, codes, and standards ...
