What is Etal sealing ring?

etal sealing ring is the most widely used static sealing structure in the industry. Although its structural size is small compared to the entire equipment, its sealing performance will directly affect the safety of the entire equipment and even the entire system. Metal sealing rings are used in the sealing of aerospace engines because

Why are metal sealing rings used in aerospace engines?

will directly affect the safety of the entire equipment and even the entire system. Metal sealing rings are used in the sealing of aerospace engines because f their advantages such as low temperature resistance and low pressure deformation. However, their disadvantages are high rigidity, difficulty in compression, high pre-tigh

Why do we need a sealing solution for hydrogen storage technologies?

Hydrogen storage technologies require effective sealing solutions to ensure the safe containment and efficient utilization of this versatile gas. The unique properties of hydrogen, such as its low molecular size and high diffusivity, present significant challenges for sealing technologies.

What is a PTFE seal ring made of?

The shell material of the seal ring was PTFE filled with graphite particles improve its wear resistance. The graphite particle size of PTFE-1 was 80 m m, and the graphite particle size of PTFE-2 was 20 m m. The spring material of the seal was 316 stainless steel and the U-spring was made of metal plates that had been slotted and bent.

Does a spring energized ring leak under different temperatures?

Thus, a high and low temperature sealing test of the spring-energized seal that applies to an engine was carried out. In this paper, the leakage characteristics, friction torque and wear characteristics of a spring-energized ring under different temperatures were studied.
