

What is a 61f stop overfill prevention valve?

The Model 61F-Stop Overfill Prevention Valve provides a mechanical method of positive fuel oil shut-off to prevent overfilling of above ground storage tanks during a pressurized fill (pump -in fill) delivery. Model 71

Which overfill prevention valves are available for aboveground storage tanks?

Aboveground storage tanks require a special overfill prevention valve designed for that application. Source solutions: Source is proud to offer overfill prevention valves from EBW®; (Franklin Fueling Systems), Emco-Wheaton and OPW. Call (800) 572-5578 to order an overfill prevention valve today.

How do overfill prevention valves work?

How overfill prevention valves work: There are two primary types of overfill prevention valves for USTs - automatic shutoff valves and flow restrictor valves. An automatic shutoff valve stops the flow of product when it reaches a certain level in the tank.

Can a ball float valve be installed on a storage tank?

It's important to note that "Ball float valves should not be installed on tanks with suction piping, pumped delivery, coaxial Stage I vapor recovery, remote fill pipes with gauge openings, or when shutoff valves are used for overfill prevention."
