

Who is enpal & how does it work?

Founded in 2017, Enpal has become Europe's leading solar company and Germany's leading heat pump installer in only a few years. At the core of its technology is the AI-based energy management system Enpal.One, which connects private homes with the electricity market to form a gigantic virtual power plant and enable the energy transition.

Can enpal take on the world with a solar system?

After a recent EUR215 million Series D funding that places its valuation at EUR2.2 billion, Enpal is poised to take on the world with its solar system offering that allows customers to rent the system from the beginning, without money upfront. It makes solar power more accessible and empowers more of us to transition to this energy source.

How much money does enpal make a year?

Currently, Enpal has over 40k "solar systems for rent" installed in Germany and gaining 2,000 new solar energy systems installations per month. Since its 2017 launch, it made impressive profits for the first time last year, with revenue of more than EUR400 M.

How does enpal save money?

Enpal helps customers save up-front investment costs by renting out its systems and taking care of operations. The company is the fastest-growing energy company in Europe and currently employs more than 2,000 people, including more than 500 solar installers.

What is enpal & why is it important?

It makes solar power more accessible and empowers more of us to transition to this energy source. We caught up with Mario Kohle, Enpal's CEO & Founder about how Enpal is fulfilling its vision of creating a global renewable-energy community, its hiring and expansion plans, the biggest challenges in solar energy production and consumption and more.

What challenges does enpal face?

Enpal has a different kind of challenge, which is that it needs to make sure it doesn't find itself overleveraged with the number of solar installations it has out in the market subsidized by Enpal itself, with perhaps those customers not buying as much solar energy as they'd been projected to buy.

Energy Imports Net (% of energy use): It is estimated as energy use less production, both measured in oil equivalents. A negative value indicates that the country is a net exporter. Energy use refers to use of primary energy before transformation to other end-use fuels, which is equal to indigenous production plus imports and stock changes, minus exports and fuels supplied to ...
