SOLAR PRO. Environmental analysis of ammonia energy storage

What is ammonia energy storage?

Energy storage: Ammonia energy storage is a promising technology to store and transport REwhich is carried out by converting renewable electricity into chemical energy stored in ammonia. To extract energy, ammonia can either be employed to fuel cells or in combustion engines to generate electricity.

Can ammonia be used as a green energy carrier?

Ammonia has the potentialto be used as a green energy carrier (clean fuel) as it offers high energy density compared with neat hydrogen's energy density. Furthermore, ammonia storage is less energy intensive as compared with cryogenic conditions to store liquid hydrogen.

Does ammonia provide an efficient decarbonized energy storage solution?

and regions. This paper analyses the role of ammonia in energy systems and briefly discusses the conditions under which it provides an efficient decarbonized energy storage solution preserve large volumes of energy, for a long period of time and in a trans ortable form. The outline of this paper

What are the new applications of ammonia?

The most promising new applications include: Use of ammonia as an energy carrier to facilitate international trade for renewable energy. Power generation and energy storage based on renewable ammonia. Use of ammonia as an alternative fuel - with the most promising market being international shipping.

What is the energy consumption per kg of ammonia?

The total energy consumption per kg of ammonia of the blue process (6.5 kWh/kgNH 3) is higher than for the green process (2.2 kWh/kg NH 3) (Figure 1 A). However, it must be noted that here the energy for green hydrogen production is not considered as part of the green process.

What is ammonia infrastructure?

Ammonia infrastructure refers to the several systems and components required for the production, storage, transportation, and utilization of ammonia as an energy carrier. Ammonia infrastructure is critical to comprehending the ammonia potential as a sustainable energy carrier, predominantly for a transition to a low-carbon economy.
