

What does the IEA say about Estonia?

The IEA commends Estonia for the steps it has taken to end all remaining energy trade with Russia while ensuring regional energy security, and for the work to accelerate the energy transition, including setting a 2050 carbon-neutrality target and a target for 100% of annual electricity demand to be covered by renewable energy by 2030.

Why is energy important in Estonia?

stocks of energy products, imports and exports. In Estonia, a large share of energy is still produced from non-renewable resources such as oil shale. At the same time, renewable energy is receiving more attention in the world and in Estonia - it is necessary to make sure that natural resources are preserved for future generations as well.

Is Estonia an energy-intensive economy?

Estonia is an energy-intensive economy and has experienced significant energy price increases. Retail prices for electricity and gas increased in the first half of 2022 compared with the same period in 2021 (by 55% and 154% respectively). Estonia is one of the most carbon- and energy-intensive economies in the EU.

How will Estonia transform its energy system?

Estonia has high ambitions to transform its energy system, having committed to a new renewable electricity target of 100% by 2030, and deployed new electricity production capacity from renewables in 2021. Its deployment of renewable energy reached a total of 915 MW in 2021, increasing by 25% compared to 2020.

What are the natural resources of Estonia?

Estonia Natural Resources. Estonia electricity, natural gas, oil, energy production and natural resources. - CountryReports

Does Estonia use natural gas?

Natural gas plays a relatively minor role in Estonia's energy system and is used mostly for heating. In 2021, natural gas accounted for just 8.6% of total energy supply (versus the IEA average of 30%) and came mostly from Russia.
