

Can a hybrid electric power generation system supply model community living in Ethiopia?

This paper presents the design of a hybrid electric power generation system utilizing both wind and solar energy for supplying model community living in Ethiopian remote area. The work was begun by investigating wind and solar energy potentials of the desired site, compiling data from different sources and analyzing it using a software tool.

Can a solar/wind/micro-hydro hybrid power system electrify Ethiopian remote areas?

This paper proposed a standalone solar/wind/micro-hydro hybrid power generation system to electrify Ethiopian remote areas that are far from the national utility grid.

Can a PV/wind hybrid system electrify 200 model families in Ethiopia?

Bekele determined solar and wind potentials of selected locations in Ethiopia and studied feasibility of Wind/PV hybrid system to electrify 200 model families. In the study, HOMER is used for optimization and sensitivity analysis. HOMER is used for designing and modeling of the PV/Wind hybrid system.

What is a hybrid optimization model for Energy Renewables (Homer)?

It leads to the development of renewable energy sources using a hybrid optimization model for energy renewables (HOMER) as an optimization and sensitivity tool and MATLAB as a design tool. The system uses 100% renewable energy. This system incorporated the solar photo-voltaic (PV), wind turbines, micro-hydro systems, and battery systems.

Can a hybrid power generation system combine solar and biogas resources?

To tackle these concerns, the present study suggests a hybrid power generation system, which combines solar and biogas resources, and integrates Superconducting Magnetic Energy Storage (SMES) and Pumped Hydro Energy Storage (PHES) technologies into the system.

What software is used to simulate a hybrid energy system?

System simulation software Tools such as HOMER (Hybrid Optimization Model for Electric Renewables) and RET-Screen are extensively employed for simulating and optimizing hybrid renewable energy systems [27,28].

Hybrid grid-connected solar PV used to a power irrigation system for Olive plantation in Morocco and Portugal by authors in [48], the central concern of the study is to assess the environmental impact of the proposed hybrid system as well as the energy potential relative to conventional powering of the irrigation system with PV-diesel ...

In most remote regions, traditional sources are neither available nor economical. Thus, a solution is only feasible if renewable sources available locally are exploited and used in such areas for the production of

electricity. Luckily, India has great potential from these sources, most of which are still untapped. In terms of independent operation of these ...

This study mainly focuses on main 10 off grid, bi-source hybrid systems for power generation highlighting their role in energy stability. Systems" hybridization, power generation, energy flow schemes, operation schemes, and storage and backup needs have been addressed thoroughly in this study to provide a handy reference to stake holders for ...

The Hybrid Optimization Model for Multiple Energy Resources (HOMER) software package was used to evaluate the viability of solar, hydro and wind hybrid power generation for a remote community in Ethiopia's Geba catchment. The hydrologic, climatic and demographic data were used to analyze the community's electrical supply and demand.

In this work, the techno-economic feasibility study (using HOMER) of emission-free hybrid power system of solar, wind, and fuel cell power source unit for a given rural village in Ethiopia called Nifasso (latitude of 9°58'40"N and longitude of 39°16'50"E with an estimated population of 1059) that can meet the electricity demand in a ...

In Ethiopia, electricity supply is extremely antiquated. When compared to other African countries, electric supply system and overall electric access in Ethiopia is very low. ... and Diesel Generator-battery hybrid power system options to come up with the best techno-economic and optimum configuration for supplying electricity to this village ...

micro grid renewable energy power generation results 174.2kW hydro, 48kw solar PV power produced with 800w/m² at Standard Test Conditions and 226.3kwh storage battery (for two days" autonomy). The battery used in this micro grid system is to balance the demand and renewable power generation ot available or non-functional.

The true breakthrough in the realm of power generation lies in the innovative concept of hybrid power systems. Contrary to the conventional belief that cost savings derive from utilizing the most potent solar panels or the most efficient diesel engines, the key lies in harmonizing the most economical energy production with the prevailing energy ...

Feasibility study for power generation using micro Hydro/ PV/Diesel Generator/Battery off- grid hybrid energy system for rural area of Ethiopia Addis Ababa University Addis Ababa Institute of Technology Center of Energy technology This is to certify that the thesis prepared by Feyisa Bekele, entitled: Feasibility Study of Power

In the study by Tazay et al. [145], a grid-tied hybrid PV/wind power generation system in the Gabel El-Zeit region, Egypt, was modeled, controlled, and evaluated. Simulation results revealed that the hybrid power

system generated a total of 1509.85 GW h/year of electricity annually. Specifically, the PV station contributed 118.15 GW h/year (7. ...

Semantic Scholar extracted view of "Design of a Photovoltaic-Wind Hybrid Power Generation System for Ethiopian Remote Area" by Getachew Bekele et al. ... Shortage of electric power is a serious problem in Ethiopia. The population living in urban and semi urban areas connected to the national grid makes only less than 20% of the total.

Efficient energy storage systems are essential with numerous non-programmable sources [21], rather than interconnections between grids, as reported by de Sisternes et al. [22] and Leonard et al. [23]. The role of batteries is increasingly emerging with photovoltaics (PV) and wind generation, due to lower costs and improved performance, as mentioned by Verbruggen ...

This study also indicates that, generally, remote rural villages in Ethiopia are good candidates for the deployment of one of the proposed off-grid PV-diesel generator-battery hybrid systems for electricity generation, because of their favorable solar radiation and the fact that the diesel price is almost uniform throughout Ethiopia. Utilizing ...

Feasibility Analysis and Development of Stand-Alone Hybrid Power Generation System for Remote Areas: A Case Study of Ethiopian Rural Area ... (ILSFA) in the Bloomington normal water reclamation district. The evaluation of Ethiopia's wind and solar power potential is reported in [5-7]. The authors of [8] focus on the design of an off ...

Hybrid renewable energy design for rural electrification in Ethiopia . × ... Wind-solar hybrid power generation systems can be divided into three classes according to bus bar forms, including pure AC bus bar system, pure DC bus ...

However, those hybrid systems are mainly based on multiple renewable power generation systems, including wind energy, solar energy, wave energy, and battery backup systems [9][10][11][12] [13] [14 ...
