

Where is the Fanshan deposit located?

The Fanshan deposit is located along the east side of the Wenzhou-Zhenhai Fault, in the Fanshan caldera basin, an Early Cretaceous 9 km-long, 6 km-wide elliptic-shaped basin (Fig. 1, Fig. 2 a). Abundant alunite, pyrophyllite, quartz, and minor topaz developed in the Fanshan district, which formed an 8-km² lithocap.

Which area is most proximal to the heat source of Fanshan basin?

Pingpengling area is the most proximal area to the heat source of Fanshan basin. The Fanshan alunite deposit, located in Cangnan County, Zhejiang Province, is the largest alunite deposit in China, which developed a lithocap with an extensive advanced argillic alteration.

Are there magmatic-hydrothermal centers in Fanshan lithocaps?

Two types of alunite have been identified by mineral chemistry. Efforts have been made to use the SWIR features and the mineral chemistry of alunite to vector to the possible magmatic-hydrothermal center in Fanshan, which could provide new insights to locating magmatic-hydrothermal centers for other lithocaps elsewhere.

Which Alunite is used to vector heat Center in Fanshan basin?

K-rich and Na-rich alunite have diagnostic Na/K value, Pos1480 and mineralogy. Pos1480 and ratios of Na/K, Rb/Sr*1000, etc. can be used to vector heat center. Pingpengling area is the most proximal area to the heat source of Fanshan basin.

What type of lithocap was developed in Fanshan district?

6. Conclusions The Fanshan district developed a typical lithocap, consisting of advanced argillic alteration. According to the results of SWIR reflectance spectroscopy, eight types of minerals: alunite, pyrophyllite, kaolinite, dickite, illite, phengitic muscovite, chlorite, and topaz -- were identified.

Where is the Fanshan alunite deposit located?

Geology of the Fanshan alunite deposit The Fanshan deposit is located along the east side of the Wenzhou-Zhenhai Fault, in the Fanshan caldera basin, an Early Cretaceous 9 km-long, 6 km-wide elliptic-shaped basin (Fig. 1, Fig. 2 a).

1 ??· Changes in lake water storage for 2000-2019 were assumed to be the same as those for 2002-2018. ... the Chinese Academy of Sciences Project for Young Scientists in Basic ...

A new Stanford-led study provides a first-of-its-kind global overview of the role dams and reservoirs play in providing water storage, revealing so-called grey infrastructure won't be ...

On the morning of July 25, the groundbreaking ceremony of the solar large-capacity cross-season heat storage and heating demonstration project in Huangdicheng of fanshan was successfully ...

The iconic water security mega reservoir project is one of the largest of its kind in the world and designed to extend the strategic water stock in Qatar's water network from 2 to 7 days which will increase the capacity of water storage by ...

The lower reservoir has a gross storage capacity of approximately 7.32 billion cubic metres. Gandhi Sagar pumped storage project details. The project will incorporate a water intake structure linked to six ...

The strategic water storage project in Jeddah is the largest of its kind built in Saudi Arabia to date. It is part of a large construction project of water storage facilities. The first phase will be carried ...

The strategic water storage project in Jeddah is the largest of its kind built in Saudi Arabia to date. It is part of a large construction project of water storage facilities. The first phase will be carried out in the Briman district with a total ...
