

What is the mechanical reliability of flexible energy storage devices?

As usual, the mechanical reliability of flexible energy storage devices includes electrical performance retention and deformation endurance. As a flexible electrode, it should possess favorable mechanical strength and large specific capacity. And the electrodes need to preserve efficient ionic and electronic conductivity during cycling.

Why do we need flexible energy storage devices?

To achieve complete and independent wearable devices, it is vital to develop flexible energy storage devices. New-generation flexible electronic devices require flexible and reliable power sources with high energy density, long cycle life, excellent rate capability, and compatible electrolytes and separators.

Can ultraflexible energy harvesters and energy storage devices form flexible power systems?

The integration of ultraflexible energy harvesters and energy storage devices to form flexible power systems remains a significant challenge. Here, the authors report a system consisting of organic solar cells and zinc-ion batteries, exhibiting high power output for wearable sensors and gadgets.

Do wearable electronic devices need external energy supply?

Most existing wearable electronic devices rely on external energy supply. However, to achieve wearability of electronic products, it is necessary to develop wireless or self-charging supercapacitors.

What is a portable energy storage system?

The novel portable energy storage technology, which carries energy using hydrogen, is an innovative energy storage strategy because it can store twice as much energy at the same 2.9 L level as conventional energy storage systems. This system is quite effective and can produce electricity continuously for 38 h without requiring any start-up time.

Why are fiber assemblies used in wearable electronics?

Modern wearable electronics with the nature of fiber assemblies are endowed with the advantage of textile technologies, electrical engineering and electronics, and superior capacity. The hierarchical nature of these fibrous structures (fiber-yarn-fabric, etc.) makes them particularly suitable for the fabrication of wearable electronics.
