

What is French Polynesia's energy transition plan?

French Polynesia's energy transition plan has three main objectives: Change the energy model, by gradually replacing the use of fossil fuels with renewable energies in all activities

How will smart grids affect France's future energy grids?

With smart grids, consumption can be tailored to production, which is why "consumers" play a vital role. Smart electricity meters, like Linky, or their natural gas equivalents, such as Gazpar, are among the first additions to France's future energy grids.

Does French Polynesia rely on hydrocarbons?

French Polynesia, like most island territories, is highly dependent on hydrocarbon imports. In 2019, 93.8% of energy consumed in the archipelagos came from imports of various petroleum-based fuels. The renewable energy penetration rate in power generation stood at 28.78% in 2019. This figure has remained stable over the last five years.

What makes France a good place to start a smart grid?

Through its resources: natural (geographical position, coastline, etc.), structural (numerous companies, large, small, innovative start-ups very involved) and intellectual (a dynamic university network working on the topic), France is at the cutting edge where smart grids are concerned.

Could power-to-gas technology be a smart grid?

With power-to-gas technology, they could even help build intermittent renewable energy into electricity grid networks. The CRE supports the process for energy networks to become smart grids and verifies that their introduction benefits the community while respecting mutual territorial interests.

What is smartgrids CR?

it manages a collaborative website dedicated to smart grids ( ). This is a dissemination tool for research and experimental work conducted in France. It also organises forums every three years, an information meeting and discussions on smart grid-related topics;
