Now, when sizing a grid-tied solar battery system for daily usage, you will want a system that can deliver up to 30 kWh, or possibly more for peak usage days. However, if you also want the system to provide off-grid backup battery storage, then you will typically choose 3X to 5X the daily average, or 90 to 150 kWh.

The LEAF battery case is a different shape and has no connection for the e-NV200's battery cooler. Traction batteries for these two vehicles are not interchangeable. (LEAF battery has a bump which fits under the car's back seats; e-NV200 battery is more or less flat. Especially when it's at a low state of charge, when it's flat in two ways.)
