

Why are accumulators important in hydraulic systems?

In hydraulic systems, accumulators play a pivotal role in ensuring system efficiency, reliability, and energy conservation. Their inclusion in power packs is often essential for enhancing performance and protecting the system from pressure fluctuations. This blog will explore how accumulators are integrated into hydraulic

What are hydraulic accumulator stations?

Hydraulic accumulator stations provide easy-to-install solutions tailored to our customer needs. Accumulator stations will ensure a cost-effective solution for our customers. Accumulator stations with frame, piping, accumulators with necessary valves and safety devices enable our customer to get plug-and-play modules for their assembly process.

How a new ERS combines electric and hydraulic accumulator?

At first, the structure of new ERS that combines the advantages of an electric and hydraulic accumulator is analyzed. The energy can be converted into both the electric energy and the hydraulic energy at the lowering of the boom and the generator can still work when the boom stops going down.

Why are accumulators important for electrohydraulic motion control systems?

Accumulators can conserve energy, make systems easier to control, and extend a machine's useful life, making them especially important for electrohydraulic motion control systems. This file type includes high resolution graphics and schematics when applicable.

What is EN 14359 accumulator?

EN 14359 standard defines the device described in this manual as follows: A gas pressurized accumulator for hydraulic applications. Subsequently, the device is simply referred to as the 'accumulator'. The accumulator is designed, manufactured and tested according to the PED (2014/68/EU) guidelines.

Can a hydraulic accumulator work if the boom stops going down?

The energy can be converted into both the electric energy and the hydraulic energy at the lowering of the boom and the generator can still work when the boom stops going down. Then, a method how to set the working pressure of the hydraulic accumulator is proposed.
