

Active use of heat accumulators in the thermal system has the potential for achieving flexibility in district heating with the power to heat (P2H) units, such as electric ...

Helen Ltd will build Europe's largest electric boiler plant and a thermal battery consisting of two units in the Hanasaari energy block. Construction work will begin in spring ...

Storage electric boilers work in much the same way as the direct type, but the system has a storage tank that means the water can be stored for use later. The tank can sometimes be ...

Polar Night Energy, a startup in Finland, has developed technology for warming up buildings with solar-generated heat stored in sand. The team uses thermal modeling to optimize the design ...

A look at the heating in Finland landscape reveals how the country has been at the forefront of sustainable heating practices for decades. ... with heat recovery and electric boiler models ...

Electric boilers are an effective solution to this." EPV Energy's first electric boiler was completed in 2021 in Vaskiluoto, Vaasa. EPV has been rapidly increasing its electric ...

A seasonal thermal energy storage will be built by Vantaa Energy in Vantaa, which is Finland's fourth largest city neighboring the capital of Helsinki. When completed, the seasonal energy storage facility will be the largest in the ...

The modeling of electric boilers can be more complex, taking the thermal stratification effect into account. Thermal stratification in electric boiler storage tanks indicates ...

Polar Night Energy's sand-based thermal storage system. Image: Polar Night Energy. The first commercial sand-based thermal energy storage system in the world has started operating in Finland, developed by Polar Night ...

A look at the heating in Finland landscape reveals how the country has been at the forefront of sustainable heating practices for decades. ... with heat recovery and electric boiler models increasing from 61% to 69% between 2022 and ...

The heating of water for household use is not only an elemental need in every home, but it is also responsible for about 15.1% of the total residential energy consumption in ...

Capable of storing 100 MWh of thermal energy from solar and wind sources, it will enable residents to

eliminate oil from their district heating network, helping to cut ...

New electric boilers with a capacity of 120 megawatts and an extended thermal energy storage (TES) facility have just been put into operation in Vaskiluoto, Vaasa. This brings the total capacity of the electric boilers at the ...

Helsinki-based energy company Helen Oy is introducing a new tech heat pump plant and two electric boilers in the company's production area in Patola for district heating. ... on a pilot to increase the demand response ...

Construction of the storage facility's entrance is expected to start in summer 2024. The seasonal thermal energy storage facility could be operational in 2028. District ...

A storage device made from sand may overcome the biggest issue in the transition to renewable energy. ... the sand up to 500C by resistive heating (the same process that makes electric fires ...
