

Fire safety of energy storage power station

How to prevent fire in energy storage power station?

The key to the fire prevention and control of energy storage system is early warning. Zhuo et al. took LFP battery module as the research object, and put forward the basic principles of fire detection design of energy storage power station from the aspects of risk, spacing and water supply.

Why do we need a safe energy storage & fire protection system?

In summary, by building a safe energy storage and fire protection system, the battery can run at the proper temperature range. When malfunctions of batteries take place, the monitoring of characteristic parameters can be used for safety evaluations of the LIB, so as to avoid further thermal runaway and accidents.

Are fire accidents common in energy storage power stations?

Fire accidents occur world widely in energy storage power stations in recent years, which have drawn significant concerns in the industry [165,166].

What is battery energy storage fire prevention & mitigation?

In 2019, EPRI began the Battery Energy Storage Fire Prevention and Mitigation - Phase I research project, convened a group of experts, and conducted a series of energy storage site surveys and industry workshops to identify critical research and development (R&D) needs regarding battery safety.

What is fire protection spacing in energy storage power station?

Considering the layout of energy storage power station, the fire protection spacing is designed in 3 levels. The first level is the spacing between the energy storage power station and other buildings outside the station. The second level is the spacing between the prefabricated cabin and other buildings and equipment in the station.
