

Can graphene foils improve the safety and performance of lithium-ion batteries?

This breakthrough promises to significantly enhance the safety and performance of lithium-ion batteries (LIBs), addressing a critical challenge in energy storage technology. Published in Nature Chemical Engineering, the study details the first successful protocol for fabricating defect-free graphene foils on a commercial scale.

Can graphene current collectors improve the performance of lithium-ion batteries?

Researchers have developed a pioneering technique for producing large-scale graphene current collectors. This breakthrough promises to significantly enhance the safety and performance of lithium-ion batteries (LIBs), addressing a critical challenge in energy storage technology.

Why is graphene used in lithium ion batteries?

Boosting energy density: Graphene possesses an astonishingly high surface area and excellent electrical conductivity. By incorporating graphene into the electrodes of Li-ion batteries, we can create myriad pathways for lithium ions to intercalate, increasing the battery's energy storage capacity.

Does graphene affect battery performance?

It should be noted that too much graphene does not help because of its low packing density, which can reduce the energy density of the battery. It is thus advisable to reduce the amount of graphene in the hybrid electrodes while maintaining good electrochemical performance.

Can graphene hybrid batteries be used in other batteries?

In addition to LIBs, graphene hybrids have also been shown to achieve excellent performance in a range of other batteries: for example, serving as electrodes in Na⁺ and Al³⁺ batteries, and as a high-efficiency catalyst in metal-air batteries.

Are graphene films a viable energy storage device?

Graphene films are particularly promising in electrochemical energy-storage devices that already use film electrodes. Graphene batteries and supercapacitors can become viable if graphene films can equal or surpass current carbon electrodes in terms of cost, ease of processing and performance.
