And that may not be far off. A flow battery using the new quinones and ferrocyanide would likely only have to be the size of a couple of hot water tanks to store the energy produced by a conventional home rooftop solar array. "The chemistry sounds great," says David Keith, an energy expert at Harvard, who was not part of the current study.

Wall mountable energy storage from Tesla. Each Powerwall provides 6.4 kWh, and can be combined for larger households. While these are great for capturing the extra solar power you produce and don't use (and helpful for power cuts), clawing back the initial outlay through energy savings can take some time - especially when you factor in maintenance costs.
