

What type of electricity is used in Guyana?

The electricity sector in Guyana is dominated by Guyana Power and Light (GPL), the state-owned vertically integrated utility. Although most of Guyana's electricity comes from thermoelectric diesel-engine driven generators (226 MW of installed capacity), the country has a large potential for hydroelectric and bagasse-fueled power generation.

Does Guyana offer a rebate for solar energy?

The Guyana Power & Light offers rebates (compensation) for any excess energy produced by solar systems attached to the national grid. How does solar energy impact the environment compared to traditional energy sources? Solar energy produces no greenhouse gas emissions during operation, unlike fossil fuels. What is the cost for a backup system?

Why is the energy sector important in Guyana?

The energy sector, the Prime Minister explained, is the lifeblood of any nation's development. "It is the bedrock upon which our economic prosperity, social progress, and wellbeing of our people depend." He said that tremendous improvement has been made by the Guyana Power and Light (GPL) since the current administration took office.

How is solar energy used in Guyana?

In Guyana, solar energy is used for several purposes, such as drying agricultural produce and irrigation, ICT, and to improve electricity access in rural areas. Under the Hinterland Electrification Programme, over 19,000 solar PV systems had been installed in nearly 200 communities by 2018.

How much power does Guyana generate?

Guyana had an installed power generation capacity of 226 MW in 2007, which is 0.4 kW per capita. This is lower than in other countries in the region and is hardly sufficient to cover the current demand for electricity in the country. Most electricity generation in Guyana uses Diesel engines to drive generators.

How will Guyana contribute to greener energy use?

This, he noted, will contribute to cleaner and greener energy use across the nation within the decade. By 2030, Guyana aims to produce 500 MW of electricity by embracing an energy mix composed predominantly of clean energy sources. Doing so would accommodate the growing demand for electricity while remaining environmentally conscious.

Macorp can provide a turn key infrastructure including controls, monitors, switch gears, uninterruptible power supplies, automatic transfer switches and the expertise to construct, manage and maintain the system for any major facility. For the power your operation depends on, Caterpillar has Diesel (12kW to 10,475kW) and Natural Gas (11kW to 4 ...
