

The objective of this study was to determine the suitable specific energy consumption (SEC) of cold storage rooms for chilled (0-10 °C) and frozen ( $\leq -18$  °C) cold ...

As shown in Fig. 1, the combination of cold energy storage technology and cold chain system can effectively reduce losses. At the same time, it can also use the peak-valley ...

The cold chain has played a vital role in the pandemic, helping to deliver over 750 million doses of the COVID-19 vaccine in the United States alone. 2 Constant temperature control during transportation and storage is required to maintain ...

Huang et al. [70] proposed a technical scheme for multi-temperature cold store (ultra-low temperature cold store, low-temperature cold store, medium temperature cold store, ...

The development of Energy Internet promotes the transformation of cold chain logistics to renewable and distributed green transport with new distributed energy cold chain containers ...

Results of the energy flow mapping also allow companies in the cold chains and cold logistic operators to prioritize these energy efficiency measures (i.e., starting from the ...

Through energy power calculation and demand analysis, this paper accomplished the design and installation arrangement of energy, control and cooling modules in the box, and proposed the ...

Second, PCM-based devices are discussed, covering both experimental and modelling aspects, where the device design and optimization are also briefly reviewed. Third, application ...

Cold chain logistics refers to the systematic engineering that processes the initial processing, storage, transportation, distribution, and sales of refrigerated products in a suitable ...
